

**KAMINENI INSTITUTE OF MEDICAL SCIENCES**  
**Narketpally - 508 254**

**QUESTIONS AND ANSWER WITH NAMES BE NOTED BY CHAIRPERSON -**  
**CLINICAL MEETING ON 17.10.2013**

1. **Questions:** -

- What the cause for portal hypertension in this case?
  - What is the cause for Plural Effusion?
  - Why D-dimer is very high?
- } Dr. S. Mohd Ali  
} Prof. of Medicine

**Answers:** -

- D-dimer is very non-specific. The Plural Effusion showed raised LDH - i.e. finding in exudate - (Dr. K. Venu, Professor & HOD of Pulmonary Medicine).
- The fluid is exudate due to toxemia and not the transudate because there is no evidence of previous portal hypertension - (Dr. I.B. Ganiger, Assoc. Prof. of General Medicine)
- There is no evidence of collapse of lung. It is only pleural effusion on x-ray finding - (Dr. (Brig.) R.S. Moorthy, Professor & HOD of Radiodiagnosis)

2. **Question:** - Can we go for MR Angiogram during pregnancy if color Doppler shows aneurism of splenic artery (Dr. Srinivas Behara, Professor of General Surgery)

**Answer:** - Yes if the facility is available - (Dr. (Brig.) R.S. Moorthy, Professor & HOD of Radiodiagnosis)

3. **Question:** - What is role of auto transfusion in stabilizing hemodynamics? Why not tried in this case? (Dr. T. Venkataramanaiah, Professor & HOD of Forensic Medicine)

**Answer:** - (It was not done as equipment not available - PG of Transfusion Medicine)

This process requires sterile bottle, sterile funnel and four layers of sterile gauze pieces and not required ACD solution also - (Dr. T. Venkataramanaiah, Professor & HOD of Forensic Medicine).
